AMENDMENT TO THE SPECIFICATION

Page 6, lines 13-20, amend the paragraph as follows:

The rewinding machine, indicated as a whole with 1, comprises a first winding roller 1, rotating around an axis ~~1A~~ A-A, a second winding roller 3, rotating around a second axis 3A parallel to the axis ~~1A~~ A-A, and a third winding roller 5, rotating around an axis 5A parallel to the axes ~~1A~~ A-A and 3A and moving around an axis 7 of oscillation, around which oscillating arms 9 to support the winding roller 5 are supported. The three winding rollers 1, 3 and 5 define a winding cradle 11 inside which, in the position shown in Figure 1, a first log L1 of web material is found in the final winding phase.
